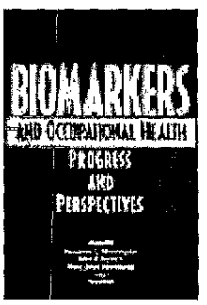
chapter selection Openbook Linked Table of Contents



Front Matter	i-iv
Table of Contents	v-x
Introduction	1-6
Part 1 National and International Perspectives	7-8
The Current Applicability of Large Scale Biomarkers Programs to Monitor Cleanup Workers	9-19
Biomarkers -- A Perspective from the Commission of the European Communities	20-24
The Role of the NIEHS in the Development of a National Program for Environmental Health Science Research	25-34
Part 2 Ethical and Legal Considerations	35-36
Legal Concerns in Worker Notification and the Use of Biomarkers in Medical Surveillance	37-47
Biomedical Research Ethics Related to Biomarkers	48-51
Biomarkers: The Down Side	52-58
Part 3 Priorities, Costs, and Standards	59-60
Application of Biomarkers: Getting our Priorities Straight	61-69
Costs of Developing a Large-Scale Biomarker Program to Monitor Cleanup Workers	70-88
Biological Monitoring of Exposure to Industrial Chemicals	89-102
Part 4 Study Design	103-104
Validation of DNA Adducts as Biological Markers of Carcinogen Exposure and Effects	105-108
The Development, Validation, and	109-115

Application of Biomarkers for Early Biologic Effects	
The Development, Validation, and Application of Biomarkers for HIV	116-119
Quantitative Decision Support Systems for Surveillance and Clinical Applications	120-130
Part 5 Cleanup Workers and Other Medical Needs	131-132
Medical Surveillance at a Hazardous Waste Site	133-139
Integrating Biomarkers into Health and Safety Programs	140-147
Clinical Applications of Biomarkers in Occupational Medicine	148-160
Part 6 Recent Technical Advances in Biomarkers Research	161-162
Mutant p21 Protein as a Biomarker of Chemical Carcinogenesis in Humans	163-173
Validation Studies for Monitoring of Workers Using Molecular Cytogenetics	174-193
Molecular Cytogenetic Approaches to the Development of Biomarkers	194-214
Biomarkers to Detect Radiation Exposures	215-225
Dioxin Congeners Distribution in Biological Samples as Biomarkers for Exposure	226-237
Xenobiotic-Metabolizing Enzymes in Biomarker Research	238-256
Implications of Large Scale DNA Analysis for the Development and Application of Biomarkers	257-263
Epigenetic Biomarkers: Potentials and Limitations	264-274
Flow Cytometry: A Powerful Technology for Measuring Biomarkers	275-290
Part 7 Cases in Point: Monitoring Worker Exposures to Metals	291-292
A Genetic Marker for Chronic Beryllium Disease	293-303
Immunology of Chronic Beryllium Disease	304-312
Biological Monitoring of Exposure to Hexavalent Chromium in Isolated Erythrocytes	313-324
Contributors	325-328
Abbreviations	329-332
Index	333-336

Index

The Open Book page image presentation framework is not designed to replace printed books, nor emulate HTML. Rather, it is a free, browsable, nonproprietary, fully and deeply searchable version of the publication which we can inexpensively and quickly produce to make the material available worldwide.

For most effective printing, use the "print" button available on each OpenBook page's tool block. The 300 x 150 dpi PDF linked to it is printable on your local printer.

More information on the Open Book is available.
